Supply only information for DIY Installation.

Old Victorian Fencing can be manufactured in panels and gates made to measure for you to install.

Concrete bases - Cast Concrete Replica Bluestone double sided face bases -Available to purchase supply only, prices as listed. Dowel holes in the end of each block make it easy to align and for DIY installation.

Guide to selection of concrete bases. 350x350 lions post base 500mm High = 400mm above ground. Main straight block bases are 400mm High = 300mm above ground. 600 - 6 = 6 holes if an intermediate post is cut in it becomes a 600 - 5. Post should only be cut into .500 .600 .700 & .800. 650 & 850 bases are the first base to butt up to an intermediate post. This also applies to rising bases 650-75 & 650 -150. Note - All sections between posts should result in an unequal number of holes so as to start and finish with a low spear top at each end of each panel. A 600 -6 x 75 or 600 - 6 x150 will butt up to a Lions post base. Rising block bases should be applied at intervals that suit the site levels. Footings should be kept 100 -150mm below finished ground level to allow sufficient space to set base out and concrete to footings.
